December 12, 2023

New Task Check Group Window

The screenshot shows the 'TASK CHECK GROUP' window. The top menu bar includes options like Add, Edit, Copy, Delete, and Print. The 'Identity' dropdown is set to 'Repair Centers'. The main area is titled 'General Information' and shows a table for 'Task Checks'. The table has columns for 'Master Check Code', 'Master Check Description', 'Master Check Co...', 'Repair Center C...', 'Task Description', 'Trade Description', and 'Priority Description'. Three entries are listed: Check1 (Input Requested), Check2 (Both P & I), and Check3 (Both P & I). The status 'Active' is checked, and the 'Description' is 'Pre-check'.

Path: *Organization > Task > Task Check Group*

Summary: Master Checks can now be assembled as a group using the new *Task Check Group* window.

Discussion:

If you use the same series of checks for many Tasks, you can create a *Task Check Group* of Master checks.

Task Check Groups are available for selection on *Task > Records / Task Check List Tab*.

Both Master Checks and Task Check Groups can be selected on the *Task / Task Check List Tab*.

NOTE: All tasks within a Task Check Group have the same *Order #*. On the *Task Check List Tab*, you can change the *Order #* for a group entry, and all checks in the group will change to the new number.

Master Check Window Enhancements

The screenshot shows the 'MASTER CHECK' window. The top menu bar includes options like Add, Edit, Copy, Delete, and Print. The 'Identity' dropdown is set to 'Repair Centers'. The main area is titled 'General Information' and shows a table for 'Check Entry'. The table has columns for 'Code', 'Description', 'Active', and 'MedTester'. The code is 002223 and the description is 'Pressures Checks'. The status 'Active' is checked. Below this is a 'Check Type Code' section with a 'Create Corrective WO' button. To the right is a 'Meter Type Code' section with 'Control' set to 'Both P & I', 'Meter Type Code' set to '24', and 'Upper Limit' and 'Lower Limit' fields. The bottom section is 'Defaults' with various priority and task codes.

Path: *Organization > Task > Master Check*

Summary: The *Master Check* window has been enhanced to accommodate changes to the *Check Entry* flyout that is opened from the WO Action Menu. Settings made on the Master Check can trigger Corrective WOs for failed checks. Also, meter readings can be transferred to the item *Meters Tab* if conditions are met. This applies to *Quick Post Check Result* as well.

Discussion:

Create Corrective WO check box: Mark this box if you want a failed check to trigger a Corrective WO. In addition, a mark in this box causes the *Default* section fields to be required.

Defaults Section: The entries in this section are used on the *Create Corrective Work Order* flyout when a check is marked Fail on the *Check Result* flyout.

New Control Fields: The *Meter Type Code* is used to identify meters on individual item *Meter Tabs*. When the same *Meter Type Code* is selected for a Master Check, new readings that are entered on the *Check Result* flyout are also recorded on the item *Meter Tab* when the *Check Result* is saved.

Upper/Lower Limit Fields: When the *Control* is *Both P & I*, you can enter the range values for check readings. If the value falls outside the range, it

triggers a Corrective WO when entered on the WO *Check Result* flyout.

WO Check Results Enhancements

The screenshot shows the 'Check Results' flyout. It includes a search bar for 'WO #', 'Date', and 'Technician Code/Name'. Below the search bar is a table titled 'Check Results' with columns: Task Code, Task Description, Seq., Check Code, Check Descr., Check Type, Pass / Fail, Corrective WO #, Value, Date, and Comment. Three rows of data are visible:

Task Code	Task Description	Seq.	Check Code	Check Descr.	Check Type	Pass / Fail	Corrective WO #	Value	Date	Comment
120001	General Carpentry Work	1	007	Safety	A-11	<input type="radio"/> Pass			2023-12-01	
120001	General Carpentry Work	3	003	Systems	Pressure	<input type="radio"/> Pass			2023-12-01	
120001	General Carpentry Work	4	1002	Pressures	Pressure	<input checked="" type="radio"/> Fail			2023-12-01	

Path: *Transactions > Work Order > Records: Action Menu – Check Results*

The screenshot shows the 'Create Corrective Work Order' flyout. It includes fields for Facility (00001, 1298765), Vehicle (UC-Van4, 12 Passenger), Date/Time (12/07/2023, 10:24 AM), Repair Center (10001, PS Base), WO Type (100, 1 Corrective), WO Type Desc (1 Corrective), WO Subtype (CAP), WO Sub Type Desc (Capital), Task (34003, General Paint Work), Task Desc (General Paint Work), Priority (1), Priority Desc (1 Emergency), Trade Desc (Paint), Completion Date, Finish Date, Status, Status Note, Schedule to Tech, Schedule to Tech Name, Action Requested (Pressures Checks Value: *New1), and a large 'Corrective Action' text area. At the bottom are 'Save' and 'Cancel' buttons.

Path: *Transactions > Work Order > Records: Action Menu – Check Results Failed Check Create Corrective Work Order flyout*

Summary: Entries made from the Work Order Action Menu *Check Results* flyout can trigger corrective WOs for failed checks. In addition, qualifying meter readings entered on the *Check Results* flyout are transferred to the item's *Meters* Tab. This also applies to *Quick Post Check Results*.

Discussion:

Pre-requisites to Use the Feature

- Master Check records completed as described in the previous topic
- Task record that includes the Master Check on the *Task Check List*
- *MWI / Meters* Tab with Meter entry that has Meter Type that matches the Master Check
- Work Order with a Task that includes *Task Check List*

When the checks are to be recorded on the Work Order, select *Check Results* on the Action Menu in View mode.

If you mark the *Fail* radio button, the *Create Corrective Work Order* flyout opens with all the required fields completed. These are taken from the Master Task record. You can make changes or additions as needed before you click *Save* on the flyout.

The new work order has a temporary number ***New1*.

Pass / Fail	Corrective WO #
<input type="radio"/> Pass	
<input checked="" type="radio"/> Fail	<i>*New1</i>
<input type="radio"/> Not Checked	

When you click *Save* on the *Check Entry* flyout, a Work Order number is assigned.

If the WO concerns MWI that have meters with a Meter Type and the Meter Type matches the Master Check, an Input value for a new reading is transferred to the item record *Meters* Tab.

December 5, 2023

Maintenance Only

The December 5, 2023, release of WebTMA 7 is for maintenance only. There are no enhancements or new features.

November 21, 2023

Maintenance Only

The November 21, 2023, release of WebTMA 7 is for maintenance only. There are no enhancements or new features.

November 7, 2023

1	Visual Ins	

Master Inspection Checks Form Specific Checks Master Inspection Check Group

Summary: General Inspections now includes inspection check values on the MWI record (including meter readings). A new Lookup, *Meter Types*, has been added, as well as a new *Master Inspection Check Group* window that allows checks to be grouped together. The *Meters* Tabs of MWI records show the new Meter Type.

Discussion:

To accommodate these changes, the new *Meter Types* Lookup table was created.

On the *Master Inspection Check* window, meter-related fields are available when the *Reading* check box is marked.

When both *Pass/Fail* and *Reading* are checked, the *Upper Limit* and *Lower Limit* fields are also visible.

The new *Inspection Check Group* window is used to accumulate several Master Checks. The new group can be selected on the Inspection Form.

Readings are logged against the related MWI records on the *Meters* Tab.

Group checks are applied to the *Inspection Form / Layout* Tab when you open the *Check Entry* flyout, i.e., you move to the third tier on the window from Section to Item to Check.

When you select *Add Check*, the *Check Entry* flyout window now includes a *Master Inspection Check Group* radio button. When marked, the available selections are groups you have created from the *Master Inspection Check Group* window.

All checks within a group have the same *Order* number. You can designate the order number using the *Start at position* field at the bottom of the *Check Entry* flyout.

On the Work Order check window, a new *Meter Inspector* name field is visible, but only if the check is linked to a Meter Type.

If a Work Order Inspection Sheet reading is outside the established limits, it will automatically fail and create a new WO; however, you must select a Technician first.

Mass Import Module

The screenshot shows the 'Import' section of the Mass Import module. At the top, there is a 'Import Summary' card with a circular progress bar divided into four segments: 11 imports (yellow), 6 Complete (green), 5 Active (yellow), and 0 Failed (red). Below this is a 'Import List' table with three rows of data:

Category	Count	Created	Updated	Entered
Equipment-34	1	Oct 26, 2023, 10:19:14 AM		Mike Hill
Biomed-33	9	Oct 5, 2023, 11:45:34 AM	3	NewUI Demo
Biomed-32	0	Oct 4, 2023, 4:31:22 PM		TMA User

Path: Admin > Mass Import > Dashboard

The screenshot shows the 'Import' section with the 'TEMPLATES' tab selected. It displays a list of available Excel Templates:

- Account: Account excel import template (Modified: Oct 22, 2023, AccountImportTemplate.xlsx)
- Asset: Asset excel import template (Modified: Oct 16, 2023, AssetImportTemplate.xlsx)

The screenshot shows the 'Import' process in three steps:

1. Configure Import: Set 'DATA TYPE' to 'Equipment' and click '+ Choose' to select an Excel spreadsheet.
2. Review and Import
3. Import Complete

The screenshot shows the 'Import' process in three steps:

1. Configure Import
2. Review and Import: Shows 1 Record to Create, 1 Record to Update, and 1 Record to Skip.
3. Import Complete

Below the steps is a table with three rows of data:

Tag #	Alternate Tag #	Description	Type	System	Parent Tag #	Facility	Building Name	Floor Code
AHU3		Air Handling Unit	HVAC			Summit		
AHU7		Air Handling Unit	HVAC			Summit		
AHU6		Air Handling Unit	HVAC			SUMMIT		

The screenshot shows the 'Update Selected Fields' dialog box. It has a text input field with placeholder 'Enter a value to update fields:' and two buttons: 'Cancel' and 'Update'.

Summary: The Mass Import module is available for System Administrators to import new data or update existing data.

The new menu options are available on the Admin menu. Go to *Admin > User Management > Records / Window Access* to give your administrative user Full access to the new window.

Discussion:

The Dashboard view shows Import history as a graphic summary and individual files.

The *Templates* tab shows a list of the available Excel Templates you can download and complete before importing. The list of Templates will increase in the future.

Select the desired link or button to download the template.

Once the template is completed, you can use the

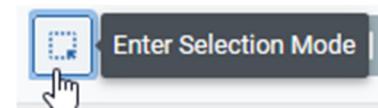

Create Import button on the Dashboard or use the menu *Admin > Mass Update > Create Import*.

Select the *Data Type* of your import template (Equipment, Asset, etc.), and click the *Choose* button to select your completed Excel spreadsheet.

Click the *Next >* button to see your data before import.

The results display with an indication of the status of each line: *Create, Update, or Invalid*.

You can use the Selection Mode buttons to make changes to a line. First, select the initial button:

This enables the other buttons:

Select a cell in the table to make the desired change in the *Update Selected Fields* popup pictured at left.

When the data is ready, click the *Import >* button.

NOTE: If the data needs serious attention, you can select *Close* on this window without

Mass Import Module

importing, revise the Excel spreadsheet, and try again.

Public Bulletin Field Enlarged

Path: *Admin > Client Info / Identity*

Summary: The *Public Bulletin* field has been changed from a text field to a text box.

Discussion:

This change in the *Public Information* section of the *Identity Tab* makes it easier for you to enter and review the bulletins you add.

Bom Group Parts

Summary: A Bill of Materials (BoM) can now be created and assigned for maintenance-worthy items.

Discussion:

The BoM accommodates a comprehensive list of parts, items, assemblies, and other materials for your maintenance-worthy item.

Select *Material > Bill of Materials* to open the new window where you see the BoM groups as well as create new BoM Groups and select parts and items.

The **Part Reference** Tab on the following MWI windows now includes a *BoM Group Parts* section:

- Entity
- Equipment
- IT Equipment

The **XRef** Tab on the following MWI windows includes a *BoM Group Parts* section:

- Biomed
- Asset
- Vehicle

The *Parts / XRef* window also includes a *BoM Group Items* section.

October 10, 2023

On-Hand Adjustment Platform API Added

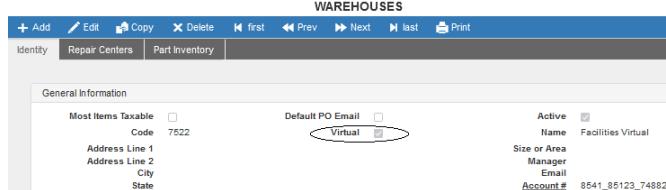

OnHandAdjustment

GET	/v2/OnHandAdjustment/{id}	Get a specific OnHandAdjustment.
GET	/v2/OnHandAdjustment	Return a list of OnHandAdjustment matching provided optional criteria.
POST	/v2/OnHandAdjustment	Create an OnHandAdjustment. Only OHA code 1,3,4,6 are currently supported

Summary: In addition to the existing Platform APIs, On-Hand Adjustment is also available.

September 19, 2023

Default Charge 50.00
WO Query

Active Name General Trade
Shop Name
Virtual Warehouse Code Virtual
Email

UDF

Path: Organization > Repair Center > Trade

Summary: You can now set up a Virtual Warehouse for accounting and reporting purposes.

Discussion:

When a separate Central Warehouse supports one or more departments, departments like Facilities can establish a Virtual Warehouse.

The Virtual Warehouse is assigned to the Trades that receive the parts from the Central Warehouse.

The Central Warehouse bills the Trade account and is assured of prompt payment.

The Trade bills the account on the work order for the parts they received.

Essentially, the Virtual Warehouse is a pass-through for billing and returns.

Also, the Central Warehouse can issue parts directly to a WO (using *QP Material*, *QP Cost*, or the WO itself) without having to create a separate Warehouse Transfer. The Trade associated with the WO Task provides the Account Number for the Virtual Warehouse.

Since the Trade has a Virtual Warehouse associated with it, it triggers a corresponding Part Transfer which automatically generates in the background. This keeps the billing between Facilities and Central Warehouse distinct as well as the billing between Facilities and their Requestor.

NOTE: If a Work Order is related to a Virtual Warehouse, you cannot issue Parts from the *On-Hand Adjustment* window.

September 5, 2023

UDF Direct Database Views Added

Summary: Views for UDF fields have been added.

Discussion:

Clients moving from WebTMA 5x On-Premise to 7x TMA hosted need to map their data for their reports and translate database tables to the TMA view.

Previously there was no view in the system for UDF data, which prevented clients from completing key reports that relied on UDF fields.

This has now been added to 7x, and clients have human readable views for UDF fields.

August 22, 2023

Maintenance Only

The August 22, 2023, release of WebTMA 7 is for maintenance only. There are no enhancements or new features.

August 8, 2023

May 2, 2023

New User Interface (UI) Settings

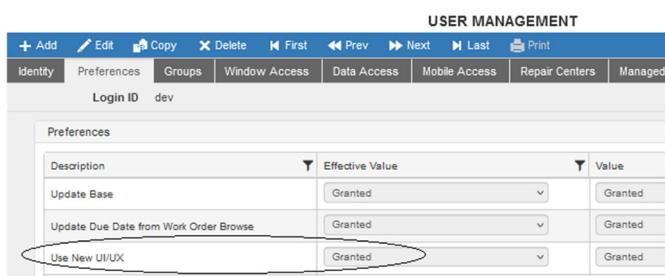

Path: Admin > Client Info / Preferences

Summary: The new *Login* and *Home* pages described below become available when settings are completed in *Client Info / Preferences* and *User or Group / Preferences*. Once you make the settings, communicate the changes with users in advance to avoid confusion.

Discussion:

Steps to enable the new pages:

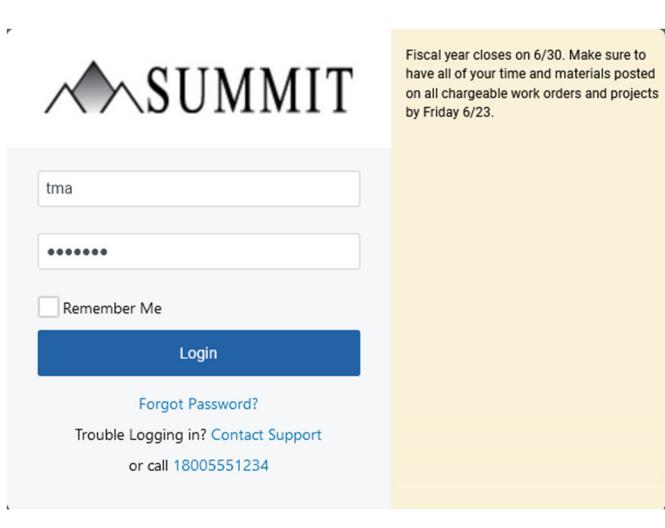

1. Go to Client Info / Preference in the Login section.
2. Grant Redirect client to new login page when using subdomained route.
3. Log out of the application.
4. Relaunch the application to see the new *Login* page.
5. Log in from the new *Login* page.
6. Go to User Management / Preferences or User Management > Groups / Preferences.
7. Grant New UI/UX.

Path: Admin > User Management / Preferences

NOTE: The User Preference for UI/UX is not visible unless you log in from the new *Login* page.

New Login Page

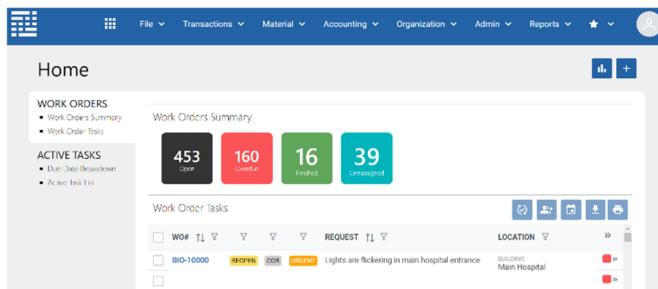

Summary: Once settings are made, Users within an Azure subdomain will be presented with this Login window.

Discussion:

The Login window includes a section for Bulletins that are added by the System Administrator from Admin > Client Info > Identity Tab in the Public Information Section.

The bulletin feature can remind users of critical updates and deadlines whenever they log in to WebTMA.

New Home Page User Interface (UI)

New Home Page – Default View

Top Menu

Filter Field

Work Order View

Summary: A dynamic new Home Page is now available. You have the option of switching between My Dashboard and this new page. Note that your system administrator grants permission to see this new feature. Instructions are at the end of this topic.

Discussion:

The new page is designed for quick visibility and easy access to your high priority items such as Work Orders and Active Tasks.

To see the new Home Page, select the  WebTMA 7 icon.

At the upper right of the new Home Page, select the  *Quick Action* button to quickly create any of the following:

- New Work Order
- New Purchase Order
- New Purchase Requisition

The new Home Page has two views:

- Work Orders (default)
- Active Tasks

Any time you want to revert to My Dashboard, select the  *My Dashboard* button at the top right.

The menu at the top of the Home Page is the same with the addition of an  icon you can select to display a *Filter* field and search the entire application.

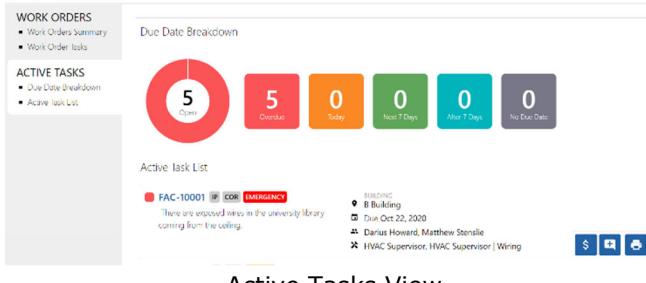

WORK ORDER VIEW

The *Summary* section of the default Work Order view shows a summary of all Work Orders with these statuses:

- Open
- Overdue
- Finished
- Unassigned

Select one of the buttons to display a list of the underlying work orders in the Work Order Tasks section.

Use the  Filter buttons at the top of the columns to see the desired Work Orders. You may also take action by marking the check box on a Work Order(s)

Active Tasks View

and choosing one of the following buttons from the top right of the list:

-  **Update Status:** Update the Status of the WO
-  **Assign Technician(s):** Assign a technician to the WO
-  **Update Due Date:** Update the Due Date on the WO
-  **Export to CSV:** Export to a csv file
-  **Print:** Print the WO

ACTIVE TASKS VIEW

The Active Tasks view shows a *Due Date Breakdown* and an *Active Task List*.

In the *Due Date Breakdown* section, you see all your active tasks categorized by the following statuses:

- Overdue
- Today
- Next 7 Days
- After 7 Days
- No Due Date

Select any of the buttons to display only those items in the *Active Task List* below.

Select the buttons at the right of a line item to:

-  **Post Cost:** Opens Work Order Cost Entry
-  **Add Task Comment:** Add comments to Tasks
-  **Print:** Print the Task

April 18, 2023

Maintenance Only

The April 18, 2023 release of WebTMA 7 is for maintenance only. There are no enhancements or new features.

April 4, 2023

Maintenance Only

The April 4, 2023 release of WebTMA 7 is for maintenance only. There are no enhancements or new features.

March 21, 2023

Bar Code Font Available

Base-10302

Printed Work Order with Barcode

Summary: Bar codes can be printed on Work Orders or from Report Writer with the installation of the w39l.ttf file available from this link to ZenDesk: <https://knowledgebase.tmasystems.net/hc/en-us/articles/14089080706957-WebTMA-7-03-21-2023-Release>.

Discussion:

Download and open the font file, then select the *Install* button at the upper left.

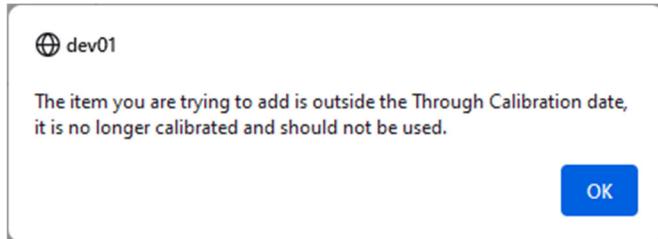

Once installed, reload your browser and be sure *Client Info / Preference* for Work Order has *Show Barcode* granted. Future print copies of Work Orders will include a bar code beneath the number.

To print special labels that attach to your maintenance-worthy items, use the Report Writer and apply a non-label style to the field for the bar code.

March 7, 2023

MWI Calibration Dates

Path: *Transactions > Work Order > Records / Costs Tab-Post Test Items Flyout*

Summary: When Maintenance Worthy Items (MWI) require calibration, the *Last Calibration* and *Through Calibration* dates can be confirmed on the *Work Order / Cost Tab* using the *Post Test Item* button. The dates tell a Technician whether the MWI is eligible to be used. If the item is no longer within calibration limits, a warning pops up.

Discussion:

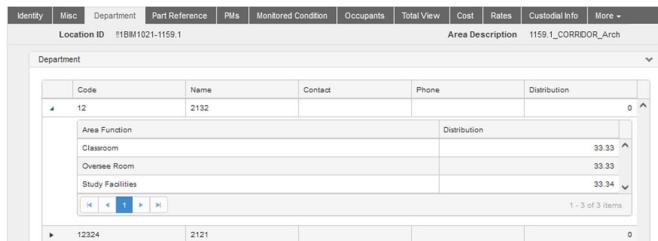

The MWI records that now include calibration date fields are: Asset, Biomed, Equipment, IT Equipment, Linear Asset, Tools, or Vehicles.

To identify the MWI as requiring calibration, first create Task records (*Organization > Task*) and select *Calibration* in the *Autotrack Description* field.

Assign the Task to the MWI on the *PM Tab* to associate the item for calibration.

When a Work Order that uses the calibrated MWI has a *Closed Date* or *Finish Date*, WebTMA uses these dates combined with PM frequency to update the related Task and MWI calibration date fields.

Areas / Department Tab Allows Nested Usage

Path: *Organization > Areas > Records / Department Tab*

Summary: Area records that show multiple ownership for different Departments now allow a usage split within each Department.

Discussion:

One Area (room) may have a 50/50 split between the School of Biology and the School of Chemistry.

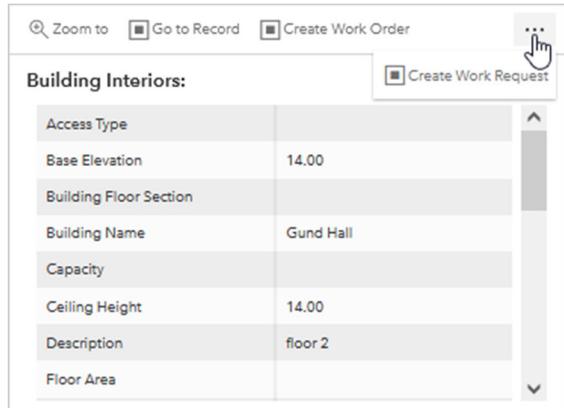

Within those splits, the School of Biology may further divide the Area function with another 50/50 split between Classroom and Laboratory.

The School of Chemistry may do this differently.

With this nested approach you can determine the percentage and type of usage for each Department.

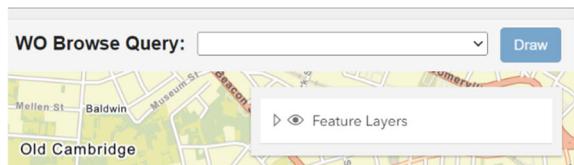

February 21, 2023

GIS Module Enhancements

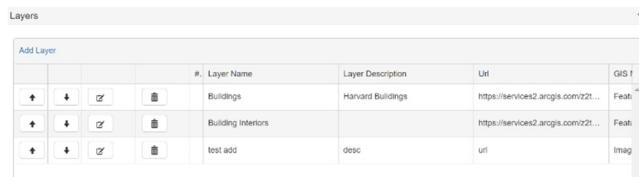

Access Type	
Base Elevation	14.00
Building Floor Section	
Building Name	Gund Hall
Capacity	
Ceiling Height	14.00
Description	floor 2
Floor Area	

Path: *File > GIS Map View*

Path: *File > GIS Map View*

Add Layer	#	Layer Name	Layer Description	Url	GIS 1
↑	1	Buildings	Harvard Buildings	https://services2.arcgis.com/2t1...	Feat.
↑	2	Building Interiors		https://services2.arcgis.com/2t1...	Feat.
↑	3	test add	desc	url	Imag

Path: *Admin > GIS > GIS Map*

Summary: New features have been added to Map View: You can now create a Work Order or a Request directly from a map item; you can use a WO Browse query to simulate a layer on the Map View page; and administrators can rearrange map Feature Layers as needed.

Discussion:

On the *GIS Map View* page, users can select the *Create Work Order* or *Create Work Request* button for any map item to easily create records for that item. Selecting the buttons opens the window in *Add* mode with the fields pre-populated. **NOTE:** The Feature Layer popup must include **only one record** to use this button successfully.

On the *GIS Map View* page, users can choose a *WO Browse Query* and select the *Draw* button to see the results directly on the map.

On the *GIS Map* page, administrators can use the up and down arrows in the *Layers* Section to determine how the layers appear on the *Feature Layers* in Map View. This is especially helpful when you add more layers to the map and want to keep the list of layers in a logical order.

February 7, 2023

New Auto Attendant Feature

Path: *Admin > Auto-Schedule Rules*

Summary: Administrators now have the option to auto-convert Requests and auto-assign a Trade to all Work Orders.

Discussion:

This allows organizations to make use of the mobile WO Queue for auto-converted requests. If neither the Auto Schedule nor the Task specify a Technician, but do specify a Trade, the WO Query for that Trade is respected.

New UDF Feature

Path: *Admin > Forms > System Form Attributes*

Summary: Administrators can now create corresponding UDF fields for two windows: *Request Log* and *Work Order*.

Discussion:

If you create UDFs in the *System Form Attributes* window for the *Request Log* and *Work Order* window and these share the same label and the same data type (i.e., Name and Type), the contents of the UDF field on your Request is carried to the corresponding UDF field on the Work Order when accepted.

These UDF fields can also be included on the *Service Request Form / Layout Tab* when System Administrators create new Service Request Forms.

January 24, 2023

Maintenance Only

The January 24th, 2023 release of WebTMA 7 is for maintenance only. There are no enhancements or new features.

January 10, 2023

Set Thresholds with New Alert Rule Window

Name	Request Approval
Description	Review Approvals
Transaction Type	Repair Order
Query Name	Accepted By Tim Last Week
Data Access User	James McCloud
Email To	jamesmccloud@email.com

Name	Email
Ada User	a.user@abc.com
George Richardson 101	GR@webtma.net

Path: *Admin > Alert Rule / Identity Tab*

Summary: Use this new window to create rules that alert specified people when certain conditions are met or exceeded.

Discussion:

Access to the window should be limited to WebTMA System Administrators.

Queries established on each of the following windows can be used to set up the alerts:

- Project
- Purchase Order
- Purchase Requisition
- Request
- Work Order

Examples: A manager wants to be informed when the number of outstanding Work Orders exceeds a specified number, or a single Request is submitted for a particular Repair Center and Department.
